

*Complete, efficient
storage and
dispensing systems
through innovation*

Adaptable Medical Storage Solutions.

The Pharmashelve Plus storage solution has been developed specifically for pharmacies and hospital dispensaries.

Designed to maximise your available space and increase efficiency. Either to increase your current stock holding in your existing space or to decrease your current space in order to utilise your area better.

Our storage systems are entirely focussed on medicine storage, retrieval and dispensing efficiencies.

We are able to customise and scale our system to suit your individual needs and create your perfect storage environment, whether in a pharmacy or hospital, Inov8 will be there to help you optimise your work flow and processes.

With our 1000mm and 500mm width bays you can expect increased storage over existing systems. Whilst completely integrating with our modular clinic furniture to expand your choice and flexibility even further.

Pharmashelve plus drawer system

This full extension pull out drawer can be fitted either angled or flat. When angled, the drawer provides a self feeding system allowing you to fill from the rear easily, rotate your stock and maintain the 'first in first out' principle. In our drawer each stock item has greater visibility within the drawer and reduces picking errors. When fitted flat, the drawer easily holds bulky items at the optimal user height.

The Deep drawer system is designed to fit those larger items which need to be stored and protected dust, either under the worktop or on a full height bay.

...many material finishes available enabling the client to personalise their pharmacy.

500 bay width drawer system with three drawer size options.

Mobile Handwash Sink

10 Litre capacity mobile sink giving 85 washes per fill. Foot operated.

Hot running water when and where you need it. Allows over 85 hand washes per fill. Gives full compliance with HSE handwash regulations.

Foot operated infra-red system guarantees maximum hygiene.

Fine spray makes maximum efficiency of water. Temperature limited to 42°C, for comfort and safety.

Large wheels make transport safe and easy. Robust design.

Typical “gondola” setup, when combining 500mm “Pharmashelve Plus” bays with the Clinic modular furniture.

Plus

Gyro

Pharmashelve GYRO 1100 round shelf unit is perfect a solution for the safe dispensing of fast moving medicines within the Pharmacy where space is restricted.

This unit, with 9 rotating shelves has a high density of stock holding in a small space; equivalent to 25-30 metres of linear storage in a tiny foot print of 1100mm diameter.

The independent revolving shelves allow for multiple selections at the same time and the GYRO is ideal for fast moving items in a busy Pharmacy delivering effective and cost efficient dispensing.

Different size options

Having different size options means the room can be worked around to make usable accessible space, pillars, alcoves and boxing on walls can all be designed around to have a workable solution.

Shown to the left the different depth units demonstrate how a pillar in the room can be worked around.

0.27m of storage per shelf
13.5m in total for this configuration

Why choose a 1000mm bay width

Working with 1000mm bay widths gives you more storage compared to 765mm bay widths, see the comparison on the left.

Less shelves are being used even with gaining greater storage so this saves on cost.

0.36m of storage per shelf
14.4m in total for this configuration

0.9m extra storage using 1000mm bays
that's the equivalent of 2.5 shelves more
storage at 1000mm wide

Storage options

Flexibility and choices

A.
Standard Bay, available in 1000W
or 500W.

F.
Pull out worktop.

K.
Optional back panels.
